

Markdown Basics

- **Bold**
- *Italic*
- ***IB***
- Normal Text
 - Sublist1
 - Sublist2

1. Ordered list element 1
2. Ordered list element 2

I get 10 times more traffic from [Google] [1 \(http://google.com/\)](http://google.com/) than from [Yahoo] [2 \(http://search.yahoo.com/\)](http://search.yahoo.com/) or [MSN] [3 \(http://search.msn.com/\)](http://search.msn.com/).

1. Ordered list element 1
2. Ordered list element 2

```
printf("Hello Markdown")
```

<https://google.com> (<https://google.com>)
